

REFILLABLE GLASS BOTTLES

with a Twist

The wants and needs of consumers are everchanging. At Stanpac, we want to ensure that you have products for your customers that are sustainable, practical and innovative. We're excited to introduce the newest evolution of our popular refillable glass bottles with a twist off tamper-evident cap and threaded neck.

This packaging is an excellent option for beverages including dairy products, cold-pressed juices, and still water. The threaded neck and tamper-evident caps are well suited to products with a longer shelf life, making this a great option for fresh salad dressings, sauces, powdered products as well as beverages for the on the go consumer.

THE PRODUCT

We've taken our refillable bottles in 12 ounce, 16 ounce squat, and 16 ounce tall sizes and redesigned them with a threaded neck. The twist off tamper-evident closure maintains the quality and integrity of beverage and food products just like our existing push on closures.

Using a direct-screen printing process called Applied Ceramic Labeling (ACL), Stanpac can print these glass bottles and create a package that speaks to your brand. Take your vision to the next level with a perfectly paired tamper-evident cap, available in a variety of colours with printed pressure sensitive labels.

THE BENEFITS

Glass packaging attracts a particular consumer. This consumer is comfortable paying a higher price point for a product that is packaged using a material that is safe for food or beverage products, can be transported and stored easily, and can be reused or safely recycled.

This new and innovative packaging is convenient for the busy consumer who is always on the go, whether it be walking, cycling, or driving.

RECYCLABILITY

Much like its predecessor, these glass bottles are fully recyclable and refillable. Encouraging bottle returns is the preferred option in the sustainability world. Standard bottle washing equipment is available to clean and sanitize the bottles for reuse.

Whether you prefer the standard milk bottle finish or the new twist off finish,

Stanpac has you covered!
